

DIAGNOSTIC LED FEATURES

Each SWITCH PANEL and CONTROL PANEL has built-in diagnostic LED indicators. The CHANNEL LED corresponds with the circuit listed on the chart to the left and indicates if the circuit is ON or OFF. The NETWORK LED indicates if the panel has power and whether or not it is communicating with the other panels within the network.

In the event of a switch panel with a NETWORK LED that indicates a fault, unplug the SWITCH PANEL and plug it directly into the NETWORK PORT on one of the CONTROL PANELS. If the SWITCH PANEL LED turns solid green, this could indicate a network wiring issue. Refer to the NETWORK WIRING GUIDE in the previous page.

CONTROL PANEL LED INDICATORS

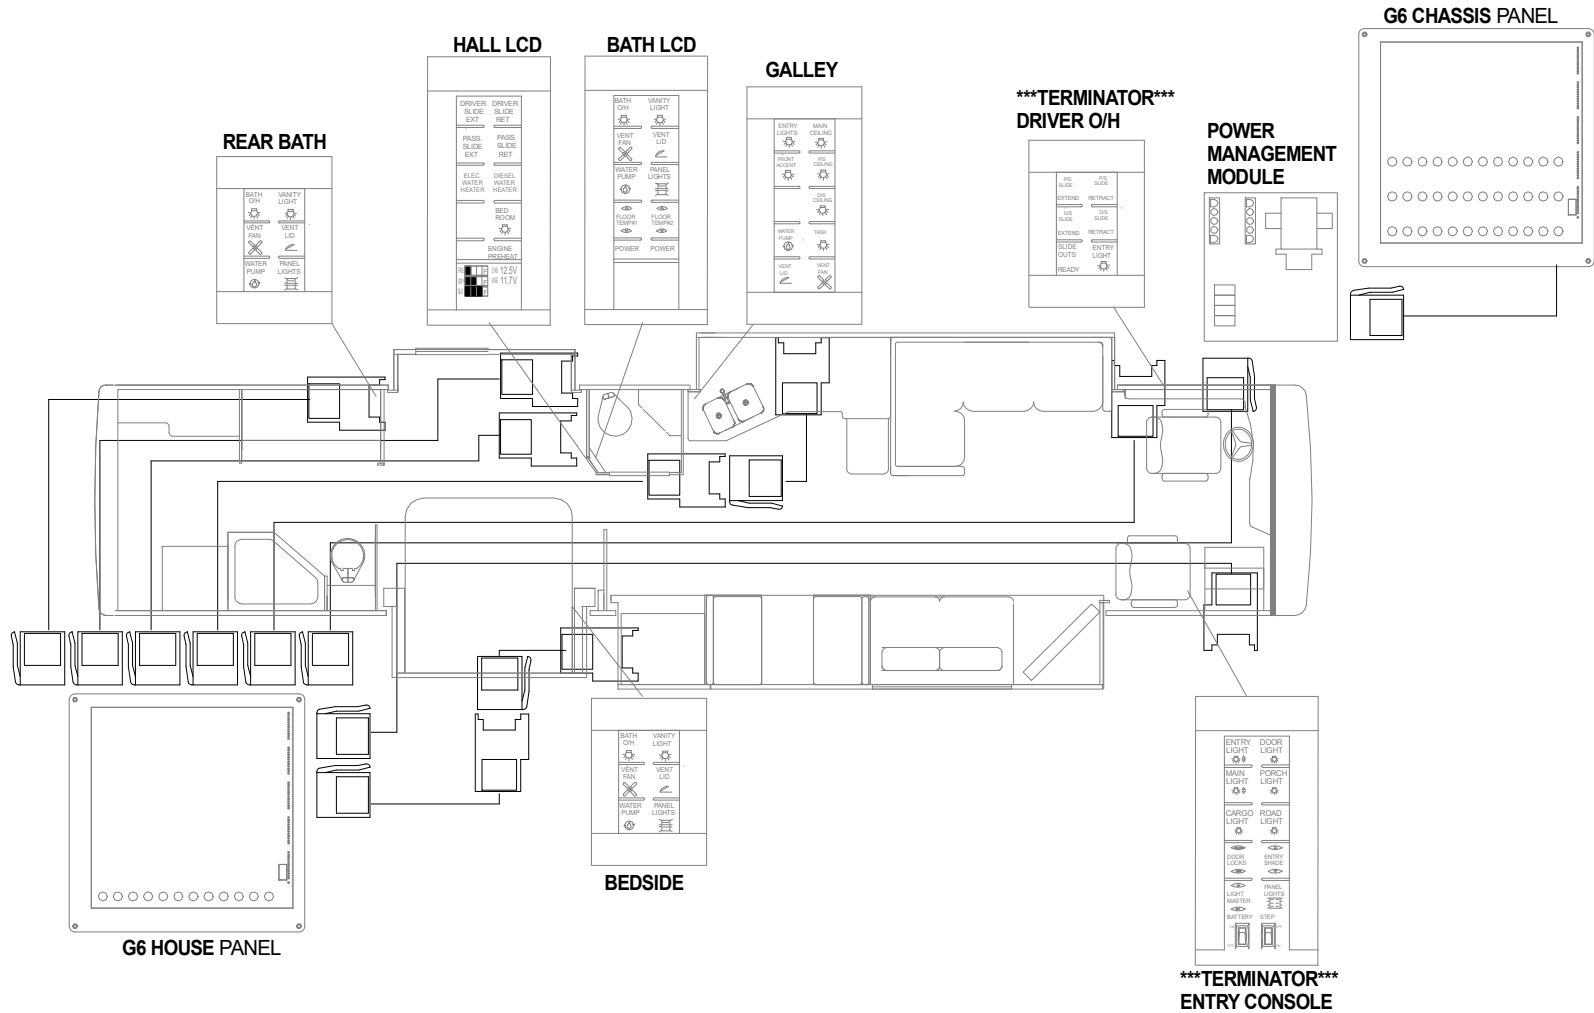

CONTROL PANEL LED INDICATORS

NETWORK STATUS LED INDICATOR

- ★ - SOLID GREEN - device is connected to network and communicating properly
 - - LED OFF - device has no power or has completely failed
- ★ - SOLID RED - device has gone offline and is not connected to network
- ★ / ○ - FAST FLASHING GREEN (4 times / sec.) - device is attempting to make initial connection and claim a network address
- ★ / ○ - SLOW FLASHING GREEN (1 time / sec.) - device was online but has not seen a valid network message for 5 seconds
- ★ / ★ - ALTERNATING RED & ORANGE - device has gone offline and is attempting to re-connect (within 30 seconds)
- ★ / ★ - ALTERNATING GREEN & ORANGE - device is currently online but has gone offline 2 or more times
